

Seogang Co., Ltd. is a company that drives technological innovation and creativity for future industries.

Seogang Co., Ltd. is a company that drives technological innovation and creativity for future industries.

its expertise lies in Korea Association of Construction Engineering and Management, forest technology services, specialized mining damage prevention projects, and Forest Civil Engineering. Seogang is expanding its portfolio to include safety diagnostics, electrical supervision, and other specialized areas. It is a company that redefines conventional practices and boldly pursues new challenges.

In addition, Seogang operates the Future Environmental Research Institute, dedicating significant resources to sustainable development. Seogang has acquired multiple patents, including one on a method for manufacturing for geopolymer binders made with pumice quarry stone and another for production of non-combustible construction panels using expanded perlite materials. The company is currently developing resource recycling and carbon-reduction materials.

Going forward, all Seogang employees and executives will strive to honor the trust of their clients through continuous technology development and by fostering a spirit of creativity and resilience.
